

CleverCOAT WOOD

NANOFORMULA

nanotech hydrophobic protector for unpainted wood
terraces, decks, facades, panels, outdoor furniture,
fences

Last is up to 15 years

CLEVERCOAT WOOD PREMIER - the main component of a two-component protective coating. Easy penetrates into wood and forms nanotech protective coating inside the material.

Forms insoluble transparent permeable/breathable wear-resistant protective layer inside the wood.

Protects effectively against fungi, root, algae, UV rays, weathering, cracks etc.

CLEVERCOAT WOOD FINISH - auxiliary component of the wood protective coating.

Covers the prime layer and gives this layer water-repellent properties to prevent leaching of the prime layer from the wooden surface until protective coating inside wood has been formed.

CAN BE APPLIED COLORLESS OR TINTED

Easy tinting: add stain additive into canister with colorless premier and mix by shaking

- no solvents or alcohol
- water based
- non-toxic
- permeable/breathable
- UV protection
- easy to apply
